EDUCATION

Ghulam Ishaq Khan Institute of Technology (GIKI)

Topi, Pakistan

Bachelor of Engineering in Software Engineering

Sep 2024 – Jul 2028

- **RELEVANT COURSEWORK:** Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Database Management (SQL), Software Requirements Engineering, Computer Organization and Architecture, DevOps.

EXPERIENCE

Google Developers Group on Campus (GDGoC) GIKI

Dec 2024 – Present

Executive Board Member

Topi, Pakistan

- Spearheaded industry-academia integration initiatives for 100+ students, bridging technical knowledge gaps through official Google community support.
- Orchestrated 10+ industry-led speaker sessions featuring firms like Vyro.ai and Vector.ai, facilitating internships for 10+ students via networking sessions.
- Executed 3 high-scale hackathons sponsored by GitHub, Base Technologies and Vyro's ImagineArt, managing 20+ teams and securing USD 5000 in prize pools.

Microsoft Learn Student Ambassadors Club GIKI

Nov 2024 – Present

Technical Coordinator

Topi, Pakistan

- Coordinated 5+ technical seminars and 2 hackathons with partners like CursorAI and Devsinc, securing PKR 200K+ in competitive prize pools.

PROJECTS

MiniJira (Project Management Software) | *PostgreSQL, Flask, React.js*

Apr 2026 – Present

- Architecting a full-stack Jira clone, specializing in **PostgreSQL** schema design to manage user authentication, ticket states, and role-based permissions.
- Optimizing data retrieval for a target base of 100+ entries, utilizing strategic indexing and SQL joins to ensure performant state management.
- Collaborating in a 4-person team to mimic enterprise-level Scrum workflows and project tracking functionalities.

KhataV2 (Voice-First Ledger) | *Gemini, MongoDB Atlas, Next.js 16, Twilio*

Apr 2026

- Engineered a voice-first financial ledger using Google Gemini LLMs to process Urdu/English natural language commands into structured JSON.
- Architected a high-performance system with Zustand for zero-latency, offline-ready tracking, accommodating 5,000+ potential daily users.
- Integrated Twilio WhatsApp API to automate receipts and summaries, reducing literacy-based friction for small business owners.

3Bins (AI Smart Waste Separator) | *Python, YOLOv8, Arduino Mega, C++*

Feb 2026

- Developed an AI-powered smart waste separator utilizing a custom **YOLOv8** model, achieving a **0.60 mAP (60%)** for real-time classification.
- Implemented serial communication between model outputs and an Arduino Mega to automate physical sorting via a multi-servo mechanism.

MedAi (Disease Diagnosis System) | *C++, DSA (BST, HashMap, Linked List)*

Oct 2025 – Nov 2025

- Engineered a diagnostic engine achieving $O(\log N)$ search efficiency for N diseases by architecting a hybrid **Binary Search Tree** and **HashMap** structure.
- Optimized symptom-to-disease mapping to $O(1)$ average-case complexity, significantly reducing processing latency for real-time diagnostic queries.
- Utilized dynamic symptom storage through Linked Lists, ensuring memory-efficient data management for 100+ medical profiles.

SKILLS

Languages: Python, C/C++, SQL (PostgreSQL), JavaScript, Tailwind CSS, HTML/CSS.

Core Competencies: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Relational Databases, SDLC, DevOps.

Developer Tools: Git/GitHub, Docker, Linux, Jira, VS Code, CursorAI, Arduino IDE.

Libraries/Frameworks: LangChain, LangGraph, RAG Pipelines, Flask, Node.js, NumPy, Pandas.
